In this table, the gross pay is equal to the hourly wage * the regular hours, plus the overtime hours * the wage * 1.5 (i.e., the employees get “time and a half for overtime).

The tax is the gross pay times the “tax rate” (see the bottom left of the table).

The net pay is the gross minus the tax.

These overtime and tax rates are used in the computations above.

Compute the sums of the gross, tax and net columns.

Sort the rows by decreasing net pay.
