IDIS110
Dreamweaver Setup

Patrick Bailey, MS
After you start Dreamweaver

On the first use of Dreamweaver, if you are asked, select “Design Mode” Otherwise, it should look similar to the following.
First, create a new site. Click on Site->New Site
You should see something like this….

Key in the name

Identify the folder where you have you will create your website.
You should see something like this….

Click on Servers to setup information for the server location.
Click to add a server
For the Server information, Enter the following:

Name of Site: My Website

HTTP Address (URL):
http://www.calvin.edu/~moodlename

*Where it says moodlename, enter your Moodle login*
Make sure you select SFTP

Moodle login and password

public_html
Click on Save

Here you'll select the server that will host your pages on the web. The settings for this dialog box come from your Internet Service Provider (ISP) or your web administrator.

Note: You do not need to complete this step to begin working on your Dreamweaver site. You only need to define a remote server when you want to connect to the web and post your pages.
Setup information, please wait.
Finally, export what you did...
You should now see the following:
Next step

- If you have already created an index.html file (i.e., started your website), look to the right and double-click on index.html.

- This opens it up in your editor.

- Now, to get started, click on the top line where you see a green folder and it says “My Website” (or the name of the folder you are using). It should have a solid blue bar over it. Then, click on the blue arrow. This starts copying your files to your Calvin website.

- You’ll be asked if you want to “put” the entire site. Click on “Okay”
And now

- You’ll see a few dialog boxes with progress bars indicating the transfer is taking place.
- Now, go into a browser and enter www.calvin.edu/~moodlename
- Remember, substitute ~moodlename with your own
- You should now see your webpage.
